Coeus
EUROPE

Why choose for Coeus Europe ?

We are the Health, Safety and Environment experts

Next to the fact that we have our own HSE experts, we are also specialists in selecting and recruiting HSE experts and have a broad range of profiles to offer for any kind of position. Whatever HSE opening you have, chances are you will find just what you need at Coeus Europe.

We are able to offer an all-in-one HSE solution

Maybe you are not looking for just one, but a team of HSE experts? Spare yourself the trouble of composing a team together on your own, and let Coeus Europe take care of it. One simple call or e-mail will do to set up a team of experts suited for the job and able to work together in an efficient and professional way. We can also provide the necessary HSE trainings for the same team or even HSE promotions, such as HSE videos.

We manage the quality of our service

To ensure quality and professionalism at all times, Coeus Europe incorporated an ISO 9001-based system to manage its personnel. This system allows us to efficiently manage, evaluate and coach each expert in our team or to optimize our trainings.

Our people

- Safety managers and safety engineers (level 1/HVK and level2/MVK)
- Safety supervisors (level 3)
- Safety guards for confined spaces and fire safety guards (equipped)
- Safety coordinators (level A or level B)
- HSE teachers
- HSE experts (HAZOP, machine directive, ...)

Our fields of expertise

- Energy (oil and gas, electricity)
- (Petro)chemical plants
- Metal structures
- Construction
- Rail
- Offshore (windmills)
- Dredging
- ...

Our Services

HSE experts/ HSE project management

Whatever project you undertake, Health, Security and Environment will always be key determiners to its success. The importance of hiring skilled professionals can hardly be overestimated, which is why you may want to surround yourself with a professional partner like Coeus Europe.

Confined space/ fire safety guards

Typically a turnaround is a period with a lot of activity within a short timespan. It is therefore also a period of elevated risk activity, that is usually carried out in small, confined spaces. For these specific situations, Coeus Europe offers teams of confined space guards supervised by a group manager. Furthermore, we also provide safety shop keepers to manage the PPE or any other equipment. Needless to say that the Coeus Europe confined space guards are equipped and trained for every specific situation.

Hazop & Machine Safety

The HAZOP method (Hazard and Operability Analysis) is a well-known method to identify and evaluate process deficiencies. Coeus Europe has experienced HAZOP team leaders and secretaries responsible to record the discussions of the HAZOP sessions. Before a machine or a composition of machines may be put in service within the European Union, the machine has to adhere to fundamental health and safety regulations of annexe I of the machine directive. This has to be proven by the certification procedure as foreseen by the machine directive. This means that the constructor has to set up a Technical Construction File, a declaration of conformity and a CE mark on his machine. Coeus Europe has the expert to compose these documents.

Training videos

An interesting way to improve the safety level is the use of safety videos. These are safety videos shot on site, explaining a certain safety topic. These are made in several languages such as English, French and Dutch. These videos can be made specific or shot on site.

HSE training

We can offer a whole range of safety trainings which can contain a theoretical and a practical part. Trainings can even be made specific to your needs. This can be a general safety training such as SCC(VCA) training or more specific knowledge packages for safety advisors such as HAZOP,... The Coeus Europe instructors are instructors that have a lot of field experience an experience in

giving trainings. We also offer a formula where HSE trainings can be followed online. When surfing to a specific website, several videos on safety topics can be followed. These videos are very specific and mainly made on site. At the end of the course there's a questionnaire on the content of the videos. A SCC(VCA) training could then be followed online.

Our Quality System (recruitment)

Assessment of every candidate

Preparation before each project

Evaluation after each project

Fine-tuning for next project

Our References

BPC

Safety was the key factor to our client BPC while building a tunnel on the GSK premises in Wavre. BPC contacted Coeus Europe to ensure the safety on site and prevent any accidents. We provided a safety coaching formula.

Total Petrochemicals

During its turnaround, Total Petrochemicals challenged Coeus Europe to find a safety solution that could be applied to the entire plant. We accepted the challenge and worked out a solution including one prevention officer level 2, supported by two team leaders and a team of confined space guards.

Bibco

This organisation of Belgian safety coordinators needed a couple of safety courses to give to their members. To that end we devised a specific training and recruited a teacher.
