

## **VCA/SCC basic**

Basic elements of Safety SCC/Safety Certificate for Contractors

### **Goal**

Point 3.2 of the VCA checklist demands that all operational personnel should follow a VCA safety training . The VCA/SCC basic training offers an overview of basic knowledge on a whole range of risks and preventive measures.

### **Candidates**

The VCA/SCC basic safety training is accessible to all personnel. No upfront knowledge or experience is required. All is needed is the motivation of the candidate.

### **Content of the training**

- Legislation
- Risks and preventive measures at work
- Accidents and incidents
- Work permits
- Dangerous substances
- Fire and explosions
- Work in confined spaces
- Machines and equipment
- Manual lifting
- Working at height
- Electricity
- Personal Protective Equipment/Collective Protective Equipment
- Signalization
- Examination by an independent third party

### **Documentation**

A paper syllabus is given with the content of the training per candidate. When the candidate passes the examination, a 10 year valid VCA certificate is given.

### **Languages**

The training as the examination is possible in several languages. Common languages are : Dutch, French and English. Other languages upon request and possibility

### **Duration**

1 day training. From 8h30 till 16h with a lunch break, followed by the examination at the end of the day

### **Examination**

The examination is a multiple choice examination which has to be done within 1hour 24 minutes. (need min. 2 weeks to book the examination, depending on agenda)
